STANLEY FRANCIS EWENIKE, PhD

Preston, Lancashire, UK | stanleyewenike@icloud.com
linkedin.com/in/stan-ewenike | github.com/stanleyewenike/my_portfolio | stanleyewenike.github.io

PROFESSIONAL SUMMARY

Data Scientist with a PhD in Computer Science and over seven years applying machine learning, statistical modelling and advanced analytics across healthcare and enterprise domains. Skilled in Python, SQL and cloud platforms (Azure, AWS, GCP) for predictive models, record linkage and production data pipelines. Recent work at NHS England includes a reproducible record-linkage pipeline for 1,700+ programme participants and a common data model linking 7,000+ records across 13 datasets, backed by a research background in distributed and context-aware systems. Right to work in the UK (indefinite leave to remain); no visa sponsorship required.

TECHNICAL SKILLS

Machine Learning & Statistics: Supervised and Unsupervised Learning, Classification, Decision Trees, Random Forests, Clustering (K-Means, hierarchical), Regression, Time Series Forecasting, Statistical Process Control, Record Linkage and Entity Resolution, Hypothesis Testing, Evaluation Design

AI Tooling & Responsible AI: Generative AI and LLM copilots (Azure AI Foundry, Microsoft Copilot, Claude Code, Cursor, LM Studio, Ollama) for development and automation, Prompt Engineering, responsible-AI and public-sector transparency principles

Programming & Analytics: Python (pandas, NumPy, scikit-learn, Matplotlib, Seaborn), SQL and T-SQL (advanced), R (basic), PySpark

ML Platforms & Tools: Azure ML, AWS SageMaker, Google Vertex AI, Databricks, MLflow, HuggingFace, Jupyter, Docker, Git and GitHub, Azure DevOps, CI/CD, VS Code

Data Engineering: ETL pipelines, SQL Server, MongoDB, BigQuery, Snowflake, Azure Data Lake, Amazon S3, Microsoft Fabric, data warehousing

Cloud & Visualisation: Azure (certified), AWS (certified), Google Cloud (certified), Snowflake (certified); Power BI, Tableau (certified), AWS QuickSight, Streamlit

PROFESSIONAL EXPERIENCE

Evaluation Senior Manager and Analytics Lead, Data Operations

NHS England, Innovation, Research, Life Sciences and Strategy | Apr 2024 – Present

- Built a tested record-linkage pipeline checking 1,700+ Clinical Entrepreneur Programme participants against company and funding registers, with byte-identical outputs across runs; identified and withdrew a survivorship-biased finding before publication
- Built a common data model resolving 7,000+ records from 13 datasets across 6 innovation programmes, with tiered entity resolution, an 11-page Streamlit app and 42 automated tests
- Built a 24-step Python pipeline and Streamlit dashboard that produce data quality, variation and strategic reports and 15 network data packs for the Health Innovation Networks from one command
- Ran readiness assurance for all 15 Health Innovation Networks, achieving a full response after cutting the instrument from 22 questions to 6, and reported prioritised recommendations to the Steering and governance group
- Apply statistical and machine learning models for trend analysis, classification and clustering to support strategic decisions
- Architect ETL pipelines using SQL, Databricks and Microsoft Fabric for enterprise data harmonisation
- Use generative AI and LLM copilots for code optimisation, faster development and automated documentation

Data Analyst

NHS England | Nov 2022 – Mar 2024

- Developed clustering and decision tree models to analyse stakeholder feedback and identify actionable patterns
- Built ETL pipelines extracting and transforming data from Amazon S3, MongoDB and enterprise data warehouses
- Applied statistical analysis to surface trends, anomalies and data quality issues in complex datasets
- Wrote T-SQL extracts for the NHS Innovation Service dashboard, using temporal tables and working-day calculations
- Used Docker for reproducible ML environments and Git and GitHub for version control

Principal Information Analyst

Warrington and Halton Teaching Hospitals NHS Foundation Trust | Aug 2021 – Oct 2022

- Line managed and mentored a team of 5 analysts, and contributed to organisational data strategy

- Built classification models to identify patient pathways, supporting clinical decision-making and resource planning
- Built a T-SQL and Power BI tool prioritising ophthalmology follow-ups against the GIRFT 25% Guaranteed Activity Date standard
- Developed time series models to analyse trends and forecast demand for operational planning
- Applied clustering techniques to improve cohort identification and segmentation

Data Quality Analyst
Southport and Ormskirk Hospital NHS Trust | Dec 2020 – Aug 2021

- Built a Data Quality Assessment Tool and a reusable NHS number Modulus 11 validation function
- Applied data mining and statistical modelling to identify patterns and anomalies in reference data
- Developed Power BI dashboards for data quality metrics and benchmarking

Senior Information Analyst
Manchester University NHS Foundation Trust | Aug 2020 – Dec 2020

- Built regression models to forecast operational demand and support capacity planning
- Prepared maternity data for bulk GROW customised centile calculation to monitor small-for-gestational-age babies

Data Analyst
Lancashire Teaching Hospitals NHS Foundation Trust | Aug 2019 – Aug 2020

- Built dashboards for CNST Saving Babies' Lives v2 and other maternity safety standards, and automated GP discharge letters
- Applied statistical process control to monitor change initiatives and measure impact
- Translated complex analyses into clear visualisations using data storytelling techniques

Research Developer / Part-Time Lecturer
Staffordshire University | Aug 2014 – Aug 2019

- Conducted systematic literature reviews and feasibility studies for HEIF research projects
- Researched collaboration gaps in distributed cloud software teams, then created a framework-selection process, an Activity Theory-based collaboration methodology and a layered microservices architecture
- Implemented a proof-of-concept cloud platform with an API gateway, an activity orchestration layer and stakeholder services
- Delivered instruction in Python, databases, software development and computing fundamentals

Reporting Analyst (MSc placement year)
Hewlett-Packard, Bracknell | Jan 2011 – Mar 2012

- Developed enterprise reporting solutions with automated ETL workflows using SQL Server and SSIS

EDUCATION

- PhD Computer Science, Staffordshire University, UK (awarded 2023)
- Postgraduate Certificate in Research Methods, Staffordshire University, UK (2016 – 2017)
- Master of Science in Computing Solutions for Business, Staffordshire University, UK (2010 – 2012, including placement year at Hewlett-Packard)
- Bachelor of Technology in Computer Science, Abubakar Tafawa Balewa University, Nigeria (2001 – 2008)

CERTIFICATIONS

Microsoft Certified: Fabric Analytics Engineer Associate (2026); AWS Certified AI Practitioner (2026); AWS Certified Solutions Architect – Associate (2026); SnowPro Associate: Platform Certification (2026); Microsoft Certified: Security, Compliance and Identity Fundamentals (2026); Google Cloud Digital Leader (2026); Google Generative AI Leader (2025); Salesforce Tableau Desktop Foundations (2025); AWS Certified Cloud Practitioner (2023); Microsoft Power Platform Fundamentals (2023); Microsoft 365 Fundamentals (2023); Microsoft Azure AI Fundamentals (2022); Microsoft Azure Data Fundamentals (2022); Microsoft Azure Fundamentals (2022)

In progress: AWS Certified Machine Learning Engineer – Associate; Microsoft Certified: Power BI Data Analyst Associate (PL-300)
